PEV appoints Grafton Range project manager, agricultural consultant, and further agribusiness partners

Pacific Enviromin Limited ("PEV") is pleased to announce that it has made two important appointments.

PEV has engaged Iain Hair of Douglas Partners to supervise the development of the Company's Grafton Range sodium bi-carbonate project. Mr Hair's career in geology and hydrology spans almost 30 years. He is a specialist in evaluation, development and management of groundwater resources, and has specific experience in the Company's Grafton Range aquifer.

Douglas Partners will supervise the project including hydrogeological modeling, supervising the drilling of the production bore and analysis of wireline logging during drilling, arranging test pumping and collection of groundwater samples during test pumping, and arranging laboratory analysis of the sodium bicarbonate brine samples.

The Company has also engaged Dr Jock Churchman, one of Australia's foremost bentonite experts, as a consultant to work with the Company in developing its range of bentonite-based agricultural products. Dr Churchman was the senior research scientist at CSIRO's Soils Division and is currently the senior research fellow at the University of Adelaide. Dr Churchman was a lead participant in the CSIRO research, funded by PEV, on developing agricultural applications for the Mantuan Downs calcium bentonite.

PEV had previously announced signed agreements with three major Australian agribusinesses, Rivcow Environmental, Kerwee Feedlot and Norland Pastoral, to use PEV's Mantuan Downs calcium bentonite for the development of stock feed products and fertilizer substitutes.

Two more significant agribusinesses have signed up for the program, with major livestock nutritional company, Four Seasons Company Pty Ltd, and waste recycling company, Biotech Compost Recyclers Pty Ltd agreeing to blend calcium bentonite with their products.

Four Seasons supplies the livestock industry in Australia and New Zealand with salt supplement blocks, loosemix and salt liquid, and molasses supplement blocks for cattle, sheep, horses, goats, deer and alpacas.

Biotech Recyclers is a specialist waste stream recycler operating throughout Queensland and New South Wales. It currently produces over 45,000 tonnes per annum of blended waste and is looking to incorporate up to 50% calcium bentonite mix.

Following strong interest from the rural sector, PEV has been sponsored for a series of information seminars in major rural centres in Queensland and New South Wales during July on the use of calcium bentonite in agriculture, and on the business of PEV. Dr Churchman will be a key speaker for the seminars.

Yours faithfully

A handwritten signature in black ink, appearing to be 'J. Churchman', written in a cursive style.
